Get Prepared for Fall!

We've made it through the summer, and what a strange season it's been. Now it is time to get your pond geared up for winter. Here's some items to consider before the snow and ice comes.

Fish Stocking

Fall is one of the best times to stock fish in your pond. Supplies are typically good so most species are available; however, don't wait too long as supplies still run out. WLPR stocks most species of game fish and forage. Our hatchery crew will deliver the fish right to your site, and will arrange for you and the family to be there to watch.

Hybrid Bluegill

(stock 500-1000 per acre)

Largemouth Black Bass

(stock 50-100 per acre)

Yellow Perch

(stock 250-500 per acre)

Fathead Minnows

(stock 50-100 lbs per acre)

Walleye (stock 25 per acre)

**Ordering is easy. Simply return the attached order form;
complete our online order form from our website
www.wisconsinlpr.com; or call toll free 866-208-0724!**

Note—Department of Ag fish farm license or DNR fish stocking permit must be in place prior to stocking. If you need assistance, we can help!

Don't forget to remove your fountain for the winter! Wisconsin's winter will not allow the operation of fountains in the pond. WLPR can assist you with fall removal, cleaning, and we even provide winter storage. Our boat equipped crane aids in easy removal and eliminates stress on the fountain. The units are power-washed and storage under roof in our 7000 sq. ft. warehouse.

Has your fountain had an overhaul lately? WLPR will send your unit back to the manufacturer for a complete rebuild. Replacing bearings, seals, oil, and worn components is critical to keeping your fountain in operation.

Are you going to run your aerators this winter? Reduce the stress and strain on your compressor by changing filters, re-adjusting regulating valves, and cleaning diffuser membranes. Proper maintenance is key to assuring your compressors continue to operate for many seasons. Contact a WLPR technician today!

Dead fish this spring??

WLPR received more calls from clients this spring than we have in 10 years regarding winter kill of their pond. Fish are a valuable resource to your pond and there are ways to minimize or eliminate the concern for winter kill situations.

- Minimize excessive die-off of aquatic plants and algae late in the fall
- Keep an area cleared of snow throughout the winter to allow sunlight penetration
- Operate an aerator

Custom designed aeration systems specifically used for fishery management available as low as \$500.00

Did you know that Wisconsin Lake & Pond Resource has pond products available for purchase?

- | | |
|------------------------------|-----------------------------|
| ◆ Sediment Reducing Bacteria | ◆ Nutrient Reduction Agents |
| ◆ Water Clarity Bacteria | ◆ Polymer Floc Logs |
| ◆ Liquid Bacteria | ◆ Lake & Pond Colorants |
| ◆ Enzymes | ◆ Liquid and Dry Alum |

Our best selling products for 2007 were:

- Polymer Floc Logs and Alum—Aids in reducing phosphorous and minimizing algae blooms
- *Sediment Reducing Bacteria*— **"All purpose cleanser" for your pond floor by reducing organic muck**
- *Enzymes*—Aid in stimulating the biological factory in your pond and improves water clarity
- *Lake & Pond Colorants*—aesthetics and to block sunlight to reduce algae and weed growth
