SPRING CHECKLIST

The snow is melting, the birds are chirping, the smell of spring is in the air, and you're looking forward to enjoying the recreational benefits your pond provides. You can maximize your pond's attributes by performing the following steps:

- Analyze your fishery- Walk around the pond and look for fish that didn't survive the winter.
- Spring is a great time to stock fish in your pond. Early orders will ensure the best selection and that sufficient quantities are avail able.
- Add dye to the pond soon after ice is off to maximize management effects. Maintain the dye levels thru the season to reduce unsightly algae and weed growth.
- May is the best time to treat the weeds in ponds. Control the weeds before they get to nuisance levels.
- Starting the season off with the use of beneficial products like bacteria and enzymes can reduce algae blooms, increase water clarity, eliminate pond smells, and reduce pond sludge.
- *Apply for your DNR permit or Fish Hatchery License.

Call us for further information or assistance.

REMINDER

Proper care and maintenance of aeration systems and fountains will ensure that they are performing as intended, as well as providing longer life and lower operating costs.

Call today to ensure your system is operating efficiently.

Come see us at the Home & Garden Show in Milwaukee!

Professional Algaecides/Herbicides Applications:

With spring just around the corner, let us eliminate your worries regarding the care your lake or pond will be needing this season. Aerators, fountains, dyes, and nutrient reducing agents are all management tools that are best taken care of early in the year.

Ponds are a huge responsibility and can be very difficult to manage on your own. Many pond owners are unable to identify problems occurring in a lake or pond until its too late and are facing extreme measures. It is advantageous to have a professional aquatic manager monitor the site to identify potential problems so action can be taken in a timely manner. Wisconsin Lake & Pond Resource can relieve you of the hassle of dealing with unsightly algae and weed growth!!

Fish stocking:

Spring is a great time to analyze your fishery. Hard winters with large amounts of snowfall can result in winter fish kills. If you experienced a fish kill, or just want to add more fish to your fishery, please give us a call so we can get you on our list for the 2008 Spring Fish Stocking!!!

Did you know that Wisconsin Lake & Pond Resource has pond products available for purchase?

- Sediment Reducing Bacteria
- Water Clarity Bacteria
- Liquid Bacteria

- Nutrient Reduction Agents
- Polymer Floc Logs
- ▲ Lake & Pond Colorants

Our best selling products for 2007 were:
