IMITATING NATURE'S DESIGN

REFUGE SERIES

The Refuge series is our premium habitat product line designed to provide internal protective space and external habitat for both juvenile and mature fishes. Every Refuge series artificial habitat contains a rigid

internal shelter space and flexible, snag-resistant limbs. Honey Hole Trees, Shrubs, and Logs were designed to benefit fish species that require refuge space at one life stage or a multitude of life stages.

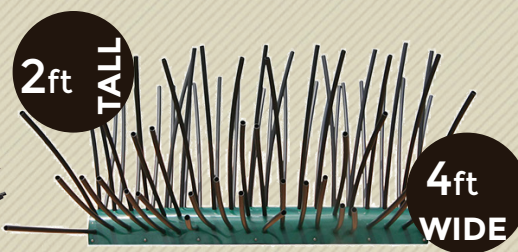

Honey Hole® Shrub **\$185 ea.**

- Premium, shallow-depth habitat designed for juvenile fishes. Compact arrangement of limbs provides protective cover around the twelve entry holes into the shelter.
- Use in water depths of 3-6 feet.

Honey Hole® Tree **\$210 ea.**

- Premium, mid-depth premium habitat designed for sport-fish species that associate with cover. Large internal cavity with 13 rectangular 2"x6" randomly placed slots in the habitat offer refuge for intermediate sized fish species.
- Use in water depths of 6-10 feet.

Honey Hole® Log **\$160 ea.**

- Shallow-depth habitat designed for protective cover for juvenile fishes. Versatile habit as units can be combined for use in multiple depths by arranging either horizontally or vertically.
- Use in water depths of 3-4 feet.

Honey Hole® Spawning Discs

\$100 3PK

ADD \$60 for Brackets

- Often, silt is the predominant substrate within ponds. Nest-guarding species fan spawning sites with fins to reduce siltation on top of any eggs that are deposited. As such, spawning discs create an elevated nesting site which reduces losses due to smothering from silt.
- Use in water depths of 2-4 feet.

LIVE SERIES

Honey Hole Live series is the only artificial fish habitat on the market that imitates the dynamic movement and structural complexity of natural cover like aquatic vegetation and brush. Flexible limbs that move with current and natural

appearances are part of each of the five different offerings within this line. Each product of the Live series is intended to provide an effective and affordable alternative to natural cover types for a variety of purposes and objectives.

**8ft
TALL**

Honey Hole® Reed \$160 ea.

- Honey Hole Reeds were designed as highly fishable substitutes to flooded vegetation and provide excellent cover for a variety of fish species in deeper water.

Use in water depths of 10-12 feet.

**7ft
TALL**

**12ft
WIDE**

Honey Hole® Canopy \$265 ea.

- Vertically dynamic artificial habitat for maximum water column coverage. Perfect for species that suspend in and around cover in deeper water. Color variation in leaves imitates live growth.

- Ideal depth for placement: Over 15 ft

**20ft
TALL**

Honey Hole® Dock Dropper \$120 ea.

- Boost the vertical fishing around your dock by providing artificial habitat for suspending fish at varying depths. Works great paired with the Honey Hole® Canopy!

- Ideal depth for placement: Over 15 ft

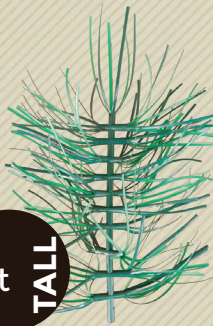

**4ft
TALL**

Honey Hole® Grass \$90 ea.

- Turn-key shallow-water habitat provider with dual color variation and flexible leaves, imitates natural submerged plant complexity and movement.

- Use in water depths of 4-6 feet.

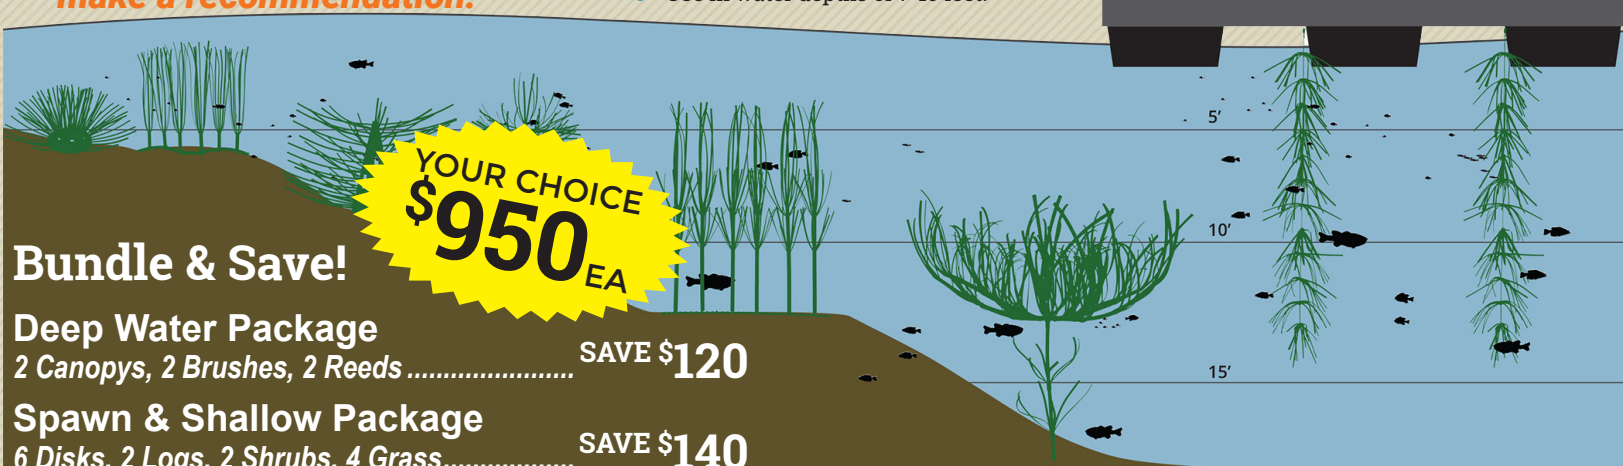

**6ft
TALL**

Honey Hole® Brush \$110 ea.

- An affordable, self-righting, complex medium-depth habitat that is simple to deploy and provides instant habitat for multiple species of fish.

- Use in water depths of 7-10 feet.
